Adult patient X-ray apron with thyroid protection, for X-rays in a seated position
Children patient X-ray apron with thyroid protection, for X-rays in a seated position

Made in Germany

CE 0302

RD644 – Patient X-Ray Apron with Thyroid Protection

Just like the classic dental apron (RD642), this model offers high flexibility and wearing comfort. In addition to the large-area protection up to the gonads, the thyroid gland is also covered when taking X-rays of the seated patient.

The practical hook-and-loop fastener at the back of the neck on the thyroid protection collar ensures a snug, secure and quick fit. Loops on the back allow easy attachment to the dentist's chair.

- **Protective Material** Standard lead or Leadfree
- **Lead Equivalent** 0.50 mm Pb (front)
